Service for Hire

[komatsu.com](https://www.komatsu.com)

Stay up and running

Your success depends on your equipment running and at its peak performance. When something goes wrong, you need to get it right, fast. Even better, you want to maintain your machines to prevent downtime.

Our Service for Hire group exists to help you stay producing by providing OEM-quality service and repair for all makes of surface and underground equipment at your shop or mine.

The Komatsu team of mechanics, welders and electricians is experienced, safety-focused and certified for surface and underground work in all states. Where contractor's licenses are required, we have them.

We arrive ready to work with a draggable steel tool sled equipped with welders, air compressors, tools and power connections. All we need is mine power to get your work done. Our service truck has even more capabilities, including a seven-ton crane, and we can line-bore from 1.5" to 12" inner diameters.

Our team

You know how important your people are to your success. We do too, so our Service-for-Hire techs have the training and work ethic to keep you going.

Our professional mechanics, electricians, welders, quality specialists and other technicians are cross-trained on surface and underground applications.

They're aided by experience in a variety of market applications including coal, industrial minerals, metal and non-metal, using their experiences to find the right solutions to your challenges. And you can be confident, as they're certified to maintain a machine's original approvals.

Safety over all

The journey to zero harm is at the center of our processes and culture, just like it is yours. Our team is trained in the latest safety regulations, practices and techniques to get you up and running.
