

# MaxiXT Head

Attachment control system for  
Komatsu heads

# Attachment technology for tracked forest machines

MaxiXT head enables the use of a Komatsu harvester head for tracked forestry machines of any brand. The control system is simple and reliable with high performance and seamless integration with the full range of Smart Forestry digital solutions.

### Universal control system for Komatsu harvester heads

MaxiXT Head offers full functionality for harvester heads, including:

- **Highly advanced sequence control technology**
- **Maximum adjustability of knives, feed rollers, tilt, and saw unit for high performance**
- **Custom functionality for different applications, such as hardwood, softwood and debarking**
- **Support for base machine monitoring**

### Designed for ease of use

The system is built for user-friendliness, with a simple interface, customizable buttons, and adaptable work modes.

A built-in troubleshooter enables quick issue diagnosis, while user profiles allow configuration based on operator experience, ensuring efficient and confident operation.

## Choice of two premium hand controls

- The widely used Suregrip offers a durable, ergonomic design for reliable operation.
- The custom-designed KCC EME is tailored for advanced harvesting, providing precise manual control of knives, feed rollers, and saw functions—ideal for tough conditions.

Both options feature industrial-grade hardware with high IP-rated components, ensuring exceptional durability and reliability.

## Includes everything needed for a powerful harvester

MaxiXT Head includes everything needed to turn a tracked machine into a powerful harvester, complete with access to advanced Head control features from MaxiXT. It also includes maintenance releases and new features from the rubber tyre industry segment.

- PC unit X50
- Base unit HMU-2
- Head unit MHC-2 or Head unit MHC-3
- Keyboard with pointer
- Display (10"/12" or 12" with touch function)
- EME or Suregrip hand controls
- Cables and mounting accessories

## Seamless integration with Smart Forestry

Always know the smartest route, plan tomorrow's work from home and keep track of the harvested logs.

The Smart Forestry digital solutions enable easy collaboration and give you tools to simplify your workday. Whether you have one machine or a large fleet, remote machine monitoring is a great addition to an efficient forestry operation.
