

Wheel loader buckets

Handle heavy material efficiently, even in challenging conditions

When you need a wheel loader bucket that can help you meet the demands of heavy-duty excavation and material handling tasks, look to **Komatsu's wheel loader buckets** to get the job done. Engineered for a variety of applications, Komatsu offers a full range of mining buckets specifically designed with reliability, resilience and performance in mind for our WE1350, WE1850 and WE2350 wheel loaders.

- **Tackle heavy-duty tasks** with high-strength construction and reinforced structures
- **Optimize loading performance** with a design that facilitates easy penetration and efficient filling
- **Maximize payloads** by aligning bucket capacity with material density to properly match payloads
- **Help reduce maintenance costs** with resilient durability that helps mitigate wear and tear

Talk with a distributor today if you want to elevate your load-carrying and digging abilities with a durable and resilient wheel loader bucket from Komatsu.

Excavate, transport and manage your materials effectively to enhance productivity

Available in standard and high-lift configurations for coal and hard rock applications, these buckets feature a Hensley-modified spade lip with P200 series weld-on adapters and XDL teeth that provide an excellent combination of penetration and wear life. All buckets are SAE rated and can deliver full payload by SAE standards.

Enhanced for your performance

Mechanically attached J-bolt lip and vertical shrouds help protect the front edges of the bucket and work designed for consistent and efficient material handling.

Protect your bucket. Work effectively.

An inside liner package provides wear protection for the bucket while minimizing overall weight for an efficient operation without compromising the loader's lifting capacity or fuel efficiency.

Consistent and efficient material penetration

Modified spade lip with P200 series weld-on adapters and XDL teeth offer excellent penetration and wear life for a reliable performance during your extraction and loading applications. Custom configurations are available upon request.

Built to help extend your equipment's lifespan

Reinforced rock deflectors (wings) help protect the tires while the overall design of the bucket provides durability.

Minimize wear on the primary lip

The teeth and shrouds are designed to provide comprehensive coverage for the lip and are easy to maintain, helping reduce maintenance costs and downtime for repairs.

Preserve the structural integrity of your bucket

Bolt-on wear runners are placed along the bottom of the bucket, serving as protective barriers against abrasion, wear and impact to help promote the bucket's service life.

Excellent performance starts with reliable, durable mining equipment.
